🎯 Target Auto Buyer ⚡ v3.2

Ultra-low latency browser automation suite for Target.com drops. Features dual-mode API stock monitoring, accelerated add-to-cart, single-pass checkout execution, and instant Discord, Telegram, and synthesized audio alerts.

Tampermonkey / Violentmonkey | v3.2 Stable | 💬 Discord Webhooks | ✈️ Telegram Bot API | 📢 Web Audio Synthesizer | RedSky API In-Stock Polling | MIT License

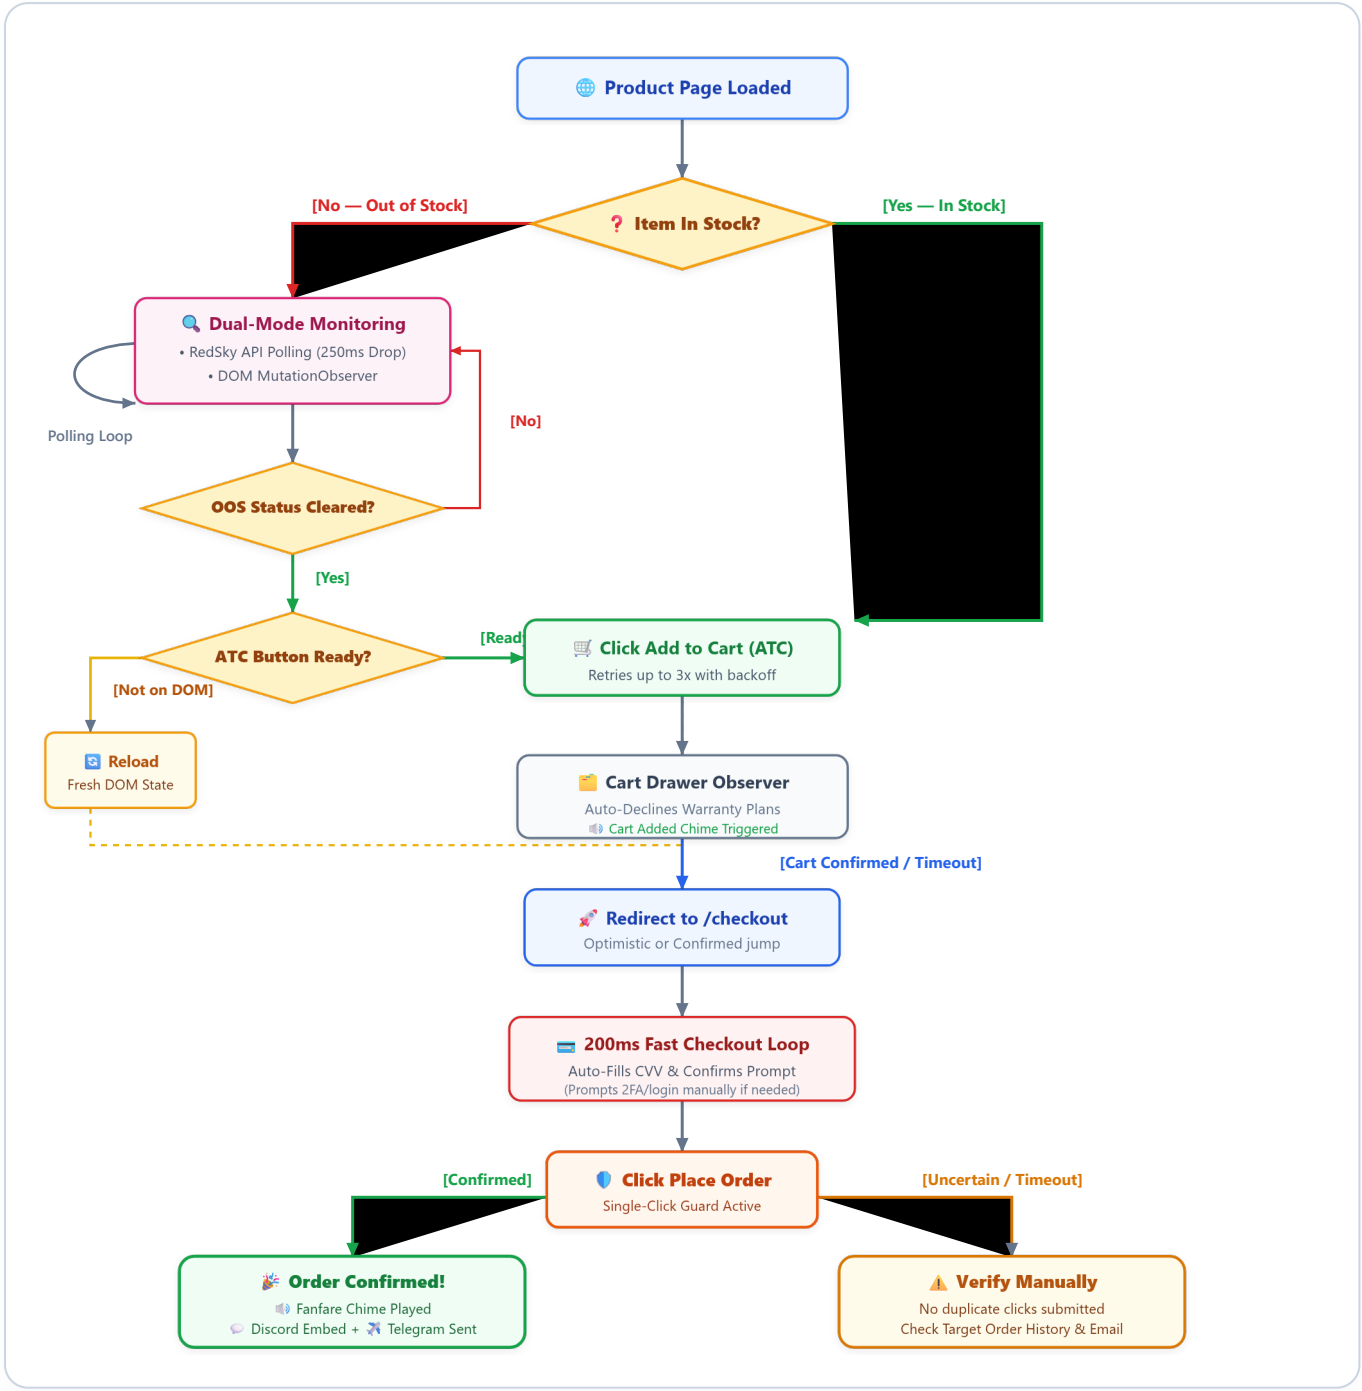

⚡ Version 3.2 — Multi-Channel Alerts Update

Version 3.2 introduces platform-specific instant notifications with custom visual and audio feedback:

- 💬 **Discord Webhook Integration:** Rich colored visual embeds featuring direct Target item links, formatted price/quantity badges, latency metrics, and local timestamps.
- ✈️ **Telegram Bot Integration:** Real-time push alerts via Telegram Bot API with clean HTML hierarchy, copyable code tags for TCIN and price, and quick action links.
- 📢 **Zero-Dependency Web Audio Synthesizer:** Plays custom acoustic chimes for In-Stock detection, Cart Confirmation, Order Placed fanfare, and errors without audio file downloads or CORS issues.
- 🧪 **In-HUD Verification Testing:** Instant "Test" buttons allow you to verify Discord webhook connectivity, Telegram bot delivery, and speaker output before drop time.
- ⚙️ **Selective Event Checkboxes:** Choose specifically which events notify you: Stock Alert, Cart Added, Order Placed, and Errors/Alerts.

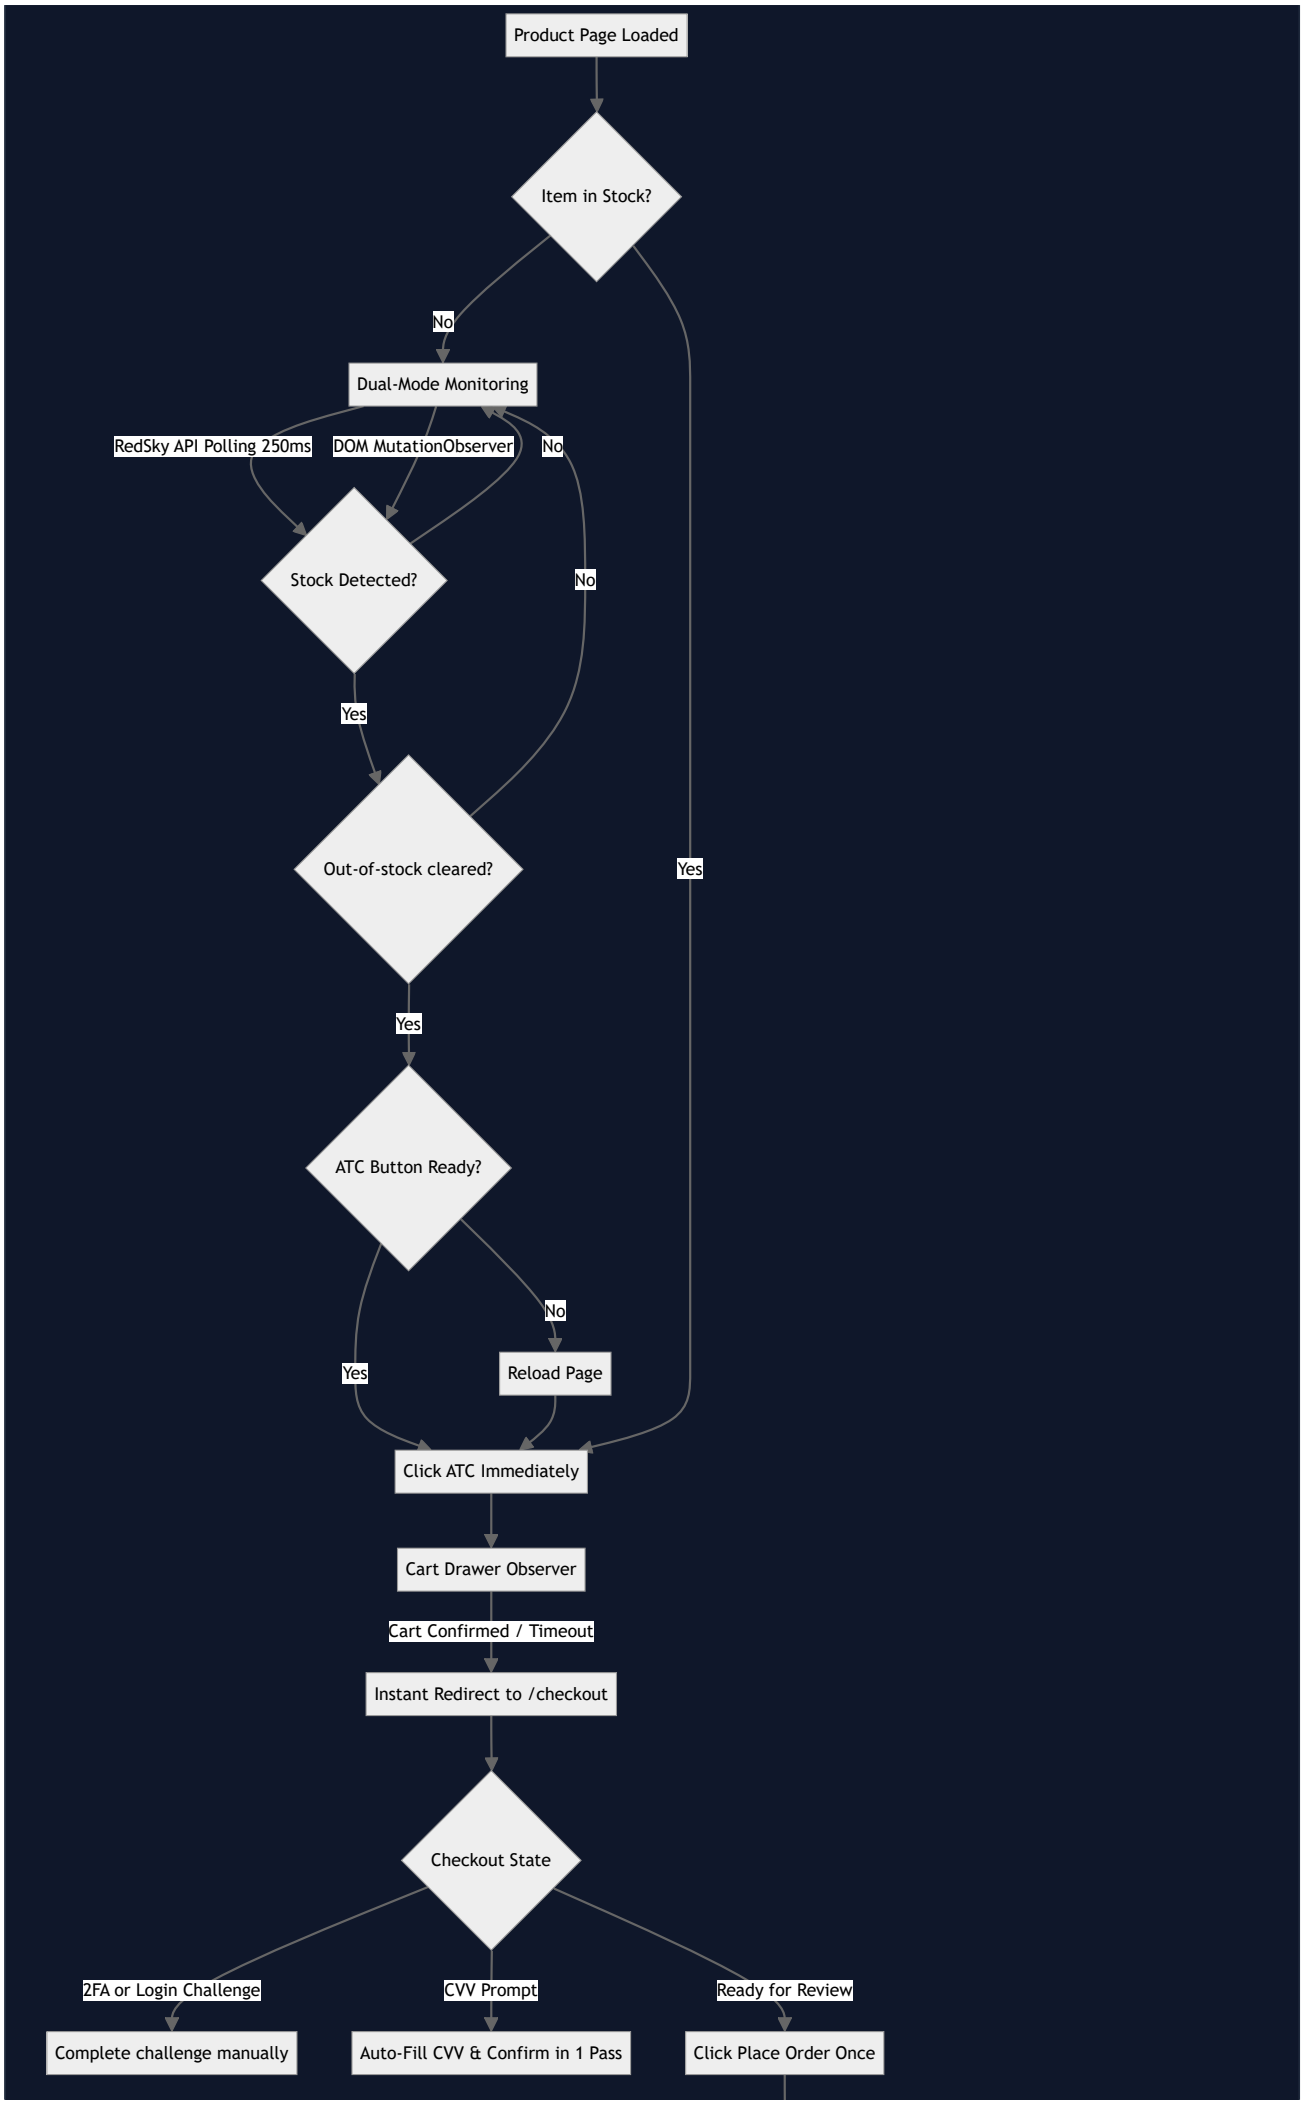

🔄 How It Works Under The Hood (Execution State Machine)

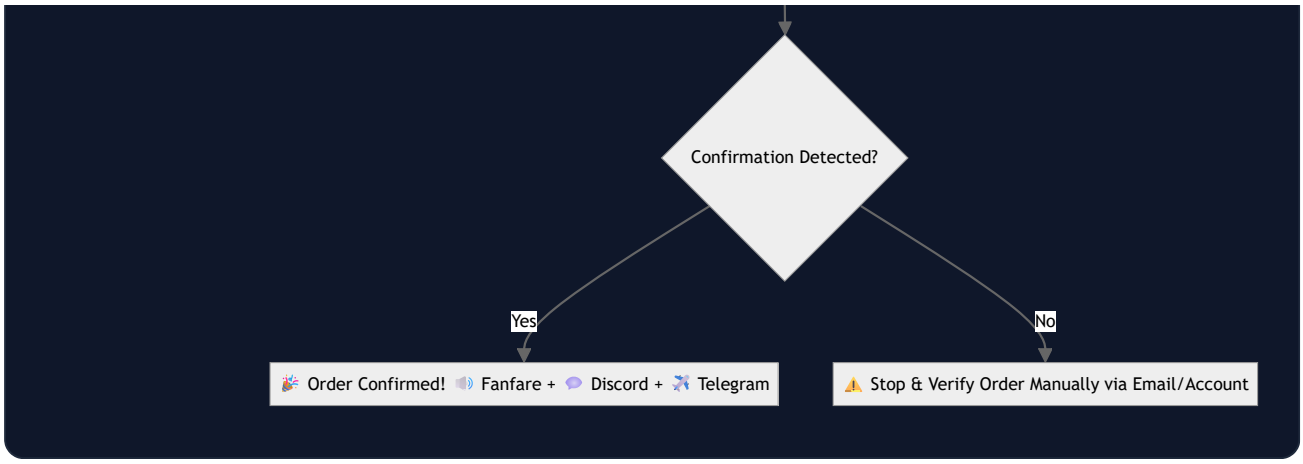

Below is the complete execution lifecycle flowchart of Target Auto Buyer, detailing every state transition from product page monitoring through checkout completion and alert dispatch:

Mermaid Execution State Machine

Product Page Loaded
Item in Stock?
No
Dual-Mode Monitoring
RedSky API Polling 250ms
DOM MutationObserver
No
Stock Detected?
No
Yes
Out-of-stock cleared?
Yes
Yes
ATC Button Ready?
No
Yes
Reload Page
Click ATC Immediately
Cart Drawer Observer
Cart Confirmed / Timeout
Instant Redirect to /checkout
Checkout State
2FA or Login Challenge
CVV Prompt
Ready for Review
Complete challenge manually
Auto-Fill CVV & Confirm in 1 Pass
Click Place Order Once

🚀 Complete Feature Breakdown

🔔 Multi-Channel Alerts

Simultaneous dispatch to Discord webhooks, Telegram bot conversations, and zero-dependency Web Audio synthesizers with in-HUD testing controls.

⚡ Dual-Mode Stock Monitoring

Combines RedSky API direct polling with DOM MutationObservers to detect inventory restocks milliseconds before UI rendering.

🛒 Intelligent Add-to-Cart

Auto-declines warranty modals, listens to live slide-out cart drawer events, and triggers instant optimistic redirects to checkout.

💳 200ms Single-Pass Checkout

Auto-fills payment security CVV, confirms intermediate review screens, and executes Place Order with strict duplicate-click guards.

📊 Real-Time Diagnostic HUD

Floating draggable panel with Large/Compact toggles, persistent window coordinates, 300-line live log, and stage-by-stage latency stopwatches.

🔒 Independent Session Isolation

State is scoped to `sessionStorage`, allowing you to run multiple browser tabs on different products without cross-tab interference.

📋 Pre-Drop Preparation (Crucial Setup)

To maximize speed during high-demand drops (PS5, GPUs, limited collectibles), ensure the following steps are performed in advance:

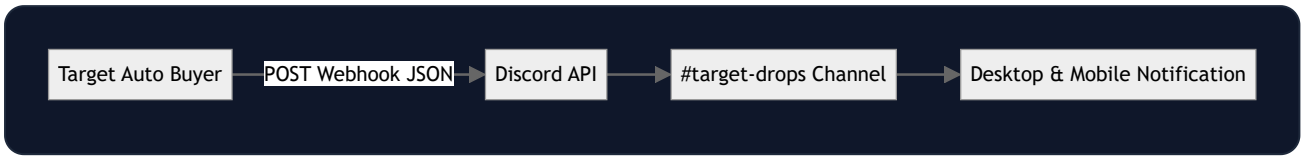

1. **Log into your Target Account:** Ensure your session is authenticated prior to the drop. Target's checkout redirects unauthenticated sessions to sign-in, which causes drop latency.
2. **Set Default Shipping & Payment:** Save your default shipping address and primary credit/debit card in your Target Wallet for 1-click checkout eligibility.
3. **Pre-Enter CVV into Bot HUD:** Enter your card's 3 or 4 digit security code in the bot panel so it can auto-fill and confirm instantly without human pause.
4. **Test Your Alerts:** Click "Test Discord Webhook", "Test Telegram Message", and "Test Audio" on the dashboard to ensure notifications are verified beforehand.

🛠️ Installation Guide

1. **Install a Userscript Extension:** Install Tampermonkey (Recommended) or Violentmonkey on Chrome, Edge, Brave, or Firefox.
2. **Create a New Script:** Click the userscript manager icon in your browser toolbar and click **Create a new script** (`+` tab).
3. **Paste Code:** Delete any default placeholder code. Copy the full contents of `Target Auto Buyer.js` and paste it into the editor.
4. **Save & Verify Permissions:** Press `Ctrl + S` (or `Cmd + S` on Mac) to save. Ensure the script is toggled ON and that Tampermonkey allows GM_xmlhttpRequest connections.

How to Connect Discord Webhooks

Discord Webhooks push instant visual embeds with item data directly into your private channel.

1. **Open Channel Settings:** In your Discord server, right-click your alerts channel (e.g., `#target-drops`) and select **Edit Channel** (⚙️).

2. **Create Webhook:** Go to **Integrations** → **Webhooks** → **New Webhook**.

3. **Copy URL:** Name the webhook (e.g. `Target Bot`) and click **Copy Webhook URL**. The URL looks like: `https://discord.com/api/webhooks/1234567890/abcdef...`

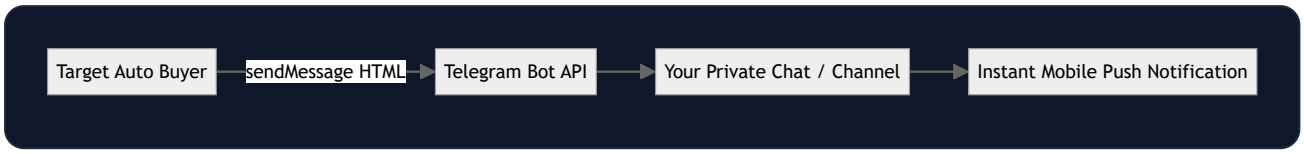

4. **Link in Bot HUD:** Expand 🔔 **Alerts & Notifications** on Target, toggle **Discord Webhook** to ON, paste the URL, and click **Test Discord Webhook**.

🎨 Discord Notification Template Architecture

- **Dynamic Color Codes:** Green (`#22C55E`) for In-Stock, Blue (`#3B82F6`) for Cart Added, Amber (`#F59E0B`) for Checkout, Emerald (`#10B981`) for Confirmed Order, Red (`#EF4444`) for Warnings.
- **Inline Grid Layout:** Formatted multi-column data displaying TCIN, Price, Quantity, and Stage Latency in organized cards.
- **Direct Hyperlink:** Clickable title link directing straight to the product page.
- **Localized Timestamp:** Discord automatically formats the time in your device's local timezone.

🛩️ How to Connect Telegram Bot API

Telegram bots deliver real-time push alerts to your phone or desktop via the official Bot API.

1. **Create Bot via BotFather:** Search for `@BotFather` in Telegram. Send `/newbot`, choose a display name (e.g., `Target Alerts`) and a username ending in `bot` (e.g., `mytarget_buyer_bot`).

2. **Copy HTTP API Token:** BotFather will issue a token formatted like: `7123456789:AAFlkJ389asdf89asdf23jkl_asdf`. Copy it.

3. **Start Chat with Your Bot:** Click the link provided by BotFather (`t.me/your_bot_username`) and press **Start**. *(Required so the bot has permission to message you!)*.

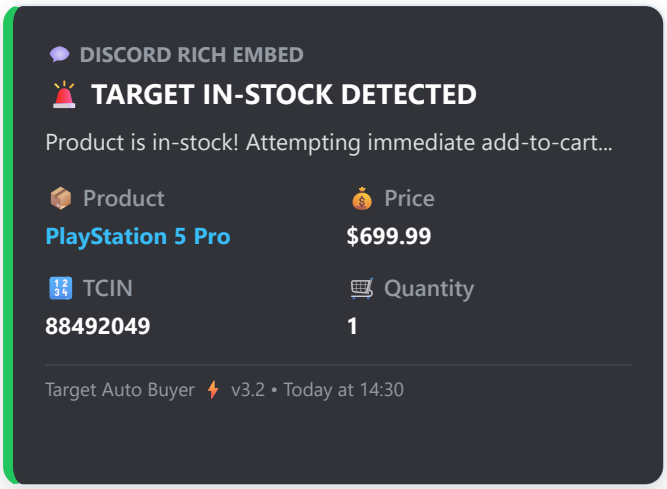

4. **Retrieve Your Chat ID:**
   - **Option A — Personal DMs (Most Common):** Message `@userinfobot` or `@RawDataBot` on Telegram to get your numeric **Id** (e.g., `123456789`).
   - **Option B — Private Group or Channel:** Add your bot as Administrator with "Post Messages" rights. For a public channel, use `@yourchannelname`. For a private channel, forward a post from the channel to `@RawDataBot` to get the negative channel ID (e.g., `-100123456789`).

5. **Link in Bot HUD:** Expand 🔔 **Alerts & Notifications**, toggle **Telegram Bot** to ON, enter Token and Chat ID, and click **Test Telegram Message**.

📱 Telegram Notification Template Architecture

- **Clean Hierarchy:** Emoji status badges and bold headers for instant readability.
- **Visual Dividers:** Section separators (`━━━━━━━━━━━━━━━━━━━━`) organize content.
- **Monospaced Badges:** Formatted with `<code>` tags for easy tap-to-copy functionality on TCIN and prices.
- **Call-to-Action Anchor:** Prominent `👉 View on Target.com` link formatted as a native HTML anchor.

🎨 Visual Notification Previews (Discord vs. Telegram)

📢 Built-in Web Audio API Synthesizer

Target Auto Buyer v3.2 features an acoustic feedback engine utilizing the browser's native Web Audio API (`AudioContext`):

- **Zero Latency:** Synthesized in real-time via hardware oscillators without requesting external MP3 files or waiting on network buffers.
- **Zero Dependencies:** No third-party audio player, no CORS restrictions, and immune to broken external file links.
- **Tone Profiles:**
  - 🚨 **Stock Alert:** Ascending arpeggio (C5 → E5 → G5 → C6) at 80ms intervals.
  - 🛒 **Cart Added:** Two-tone affirmation chime (G5 → C6).
  - 🎉 **Order Confirmed:** Celebratory victory fanfare arpeggio with sustained brass chord.
  - ⚠️ **Error / Alert:** Low warning tone sequence (F4 → D4).

📊 Platform Notification Comparison

Feature	💬 Discord Webhooks	✈️ Telegram Bot API	🔊 Audio Synthesizer
Visual Paradigm	Embed Card with Event Color Strip	Clean Structured HTML Block	Acoustic Melodic Arpeggio
Event Colors	Green / Blue / Amber / Emerald / Red	Emoji Status Badges	Ascending / Descending Tones
Direct Product Link	Clickable Title Hyperlink	Styled HTML Action Anchor	N/A
Mobile Push Alert	Discord Mobile App Notification	Telegram Instant Push Alert	Local Speaker Playback
External Credentials	Webhook URL only	Bot Token + Chat ID	None (Ready out of the box)
In-HUD Testing	Instant "Test Discord Webhook" button	Instant "Test Telegram Message" button	Instant "Test" Audio button

▶️ Launching and Operating the Bot

1. **Navigate to Product Page:** Open any Target product page (e.g. `https://www.target.com/p/...`). The floating red dashboard will appear automatically.

2. **Click "Start Bot":** The status indicator will turn green (`Running`).

3. **Dual-Mode Monitoring Engaged:** If the product is out of stock, the bot will begin RedSky API polling and listen for DOM button mutations.

4. **Restock Execution:** Once inventory clears, the bot triggers Add to Cart, auto-declines protection plans in the drawer, and optimistically jumps straight into `/checkout`.

5. **Checkout Submission & Duplicate Protection:** The bot auto-fills CVV, clicks Place Order once, and awaits confirmation. Never click Place Order manually if the bot is in progress.

> ⚠️ **Max Price Warning:** Max Price is an informational filter and not an absolute purchase guarantee. Always verify the item, quantity, and listed price before enabling automation.

🎛️ Dashboard Configuration Settings

Setting	Function / Purpose	Recommended Setting
CVV	Card security code for your saved Target payment card. Auto-filled during single-pass checkout.	Your saved card's CVV
Max Price ($)	Holds add-to-cart if listed product price exceeds this value ($0 disables check).	Item MSRP / Budget
Quantity	Desired purchase quantity (1–10).	`1`
Poll Min / Max (ms)	Lower and upper bound for randomized stock polling during normal standby.	`500` / `1500`
Drop Mode (⚡)	Forces aggressive 250ms RedSky API polling. Ideal for active high-demand drops.	Enable near drop time
Drop Time	Scheduled drop datetime. Automatically switches to aggressive mode 30s prior.	Official release time
Audio Alerts	Plays distinct acoustic chimes for stock detection, cart confirmation, and order success.	Enabled
Discord Webhook	Webhooks URL for Discord embed notifications.	User Webhook URL
Telegram Bot	Bot Token + Chat ID for instant Telegram notifications.	Token + Chat ID
Event Filters	Selectively enables/disables alerts for Stock, Cart, Order, and Errors.	All Checked

🧪 Safe Testing Guide (Dry-Run Verification)

Verify that all bot systems and notification integrations are functioning without risking an unwanted purchase:

1. **HUD Verification:** Open any active product page on Target.com (e.g., household item). Confirm the floating red dashboard appears in the bottom right corner.
2. **Panel Controls:** Click **Large / Compact** and the minimize **–** button. Drag the panel header to test screen coordinate persistence.
3. **Audio Test:** In 🔔 **Alerts & Notifications**, click **Test** next to Audio Alerts. Confirm your browser plays the victory chime.
4. **Discord / Telegram Test:** Enter your credentials and click **Test Discord Webhook** and **Test Telegram Message**. Confirm both apps receive sample alerts.
5. **Drop Countdown:** Enter a future time in **Drop Time**. Confirm the countdown counts down correctly.
6. **Checkout Dry-Run Safety:** If testing add-to-cart on an in-stock item, click ■ **Stop** before reaching the final Place Order button.

⚙️ Advanced Code Constants (CFG Reference)

All core timing thresholds are centralized at the top of `Target Auto Buyer.js` for easy tuning:

```
const CFG = {
    POLL_MIN_MS:             500,     // Normal-mode minimum poll interval
    POLL_MAX_MS:            1500,     // Normal-mode maximum poll interval
    DROP_MODE_POLL_MS:       250,     // Ultra-aggressive drop-mode interval
    ADAPTIVE_LEAD_SEC:        30,     // Seconds before drop time to switch to aggressive
    API_MAX_RETRIES:           3,     // API retries with exponential backoff
    API_RETRY_BASE_MS:       150,     // Backoff base for retries
    ATC_MAX_RETRIES:           3,     // Max ATC click attempts before fallback
    CART_CONFIRM_TIMEOUT_MS: 4000,    // Max wait for cart drawer confirmation
    CHECKOUT_INTERVAL_MS:    200,     // Checkout state machine tick rate (ms)
    STARTUP_POLL_MS:         100,     // Smart startup page readiness poll
    STARTUP_MAX_WAIT_MS:    5000,     // Max wait for initial page elements
};
```

Constant	Default	Description
`POLL_MIN_MS` / `POLL_MAX_MS`	`500` / `1500`	Randomized polling jitter range to prevent predictable bot footprints.
`DROP_MODE_POLL_MS`	`250`	Aggressive poll interval for fast restock detection during active drops.
`ADAPTIVE_LEAD_SEC`	`30`	Time window prior to scheduled drop time when Drop Mode auto-activates.
`CART_CONFIRM_TIMEOUT_MS`	`4000`	Maximum time the bot waits for the cart slide-out drawer before optimistic redirect.
`CHECKOUT_INTERVAL_MS`	`200`	Interval frequency of the checkout evaluator state machine loop.

❓ Frequently Asked Questions (FAQ)

▼ Could monitoring be rate-limited by Target?

Yes. Sending hundreds of rapid requests per minute from a single IP address can lead to temporary rate-limiting (HTTP 429) or CAPTCHAs. Use normal randomized intervals (500–1500ms) during standby and save aggressive Drop Mode (250ms) for the 1–2 minutes surrounding an active drop.

▼ What happens if a CAPTCHA or Two-Factor challenge appears?

The bot does not bypass CAPTCHAs or 2FA verification prompts. If a challenge is triggered, complete it manually in the browser. The bot will automatically resume execution once the standard checkout or product flow continues.

▼ Can I run multiple tabs on different products simultaneously?

Yes! Running state is scoped to `window.sessionStorage`, allowing each browser tab to monitor a different TCIN product independently without cross-tab conflicts.

▼ Does Order Confirmed guarantee delivery?

No automated tool can guarantee inventory allocation or order fulfillment. Always check your Target order history and confirmation email to confirm that Target accepted and processed the order.
